

PanBlast™ ATV Double Venturi Blast Nozzles

*"Surface Preparation
Is Our Business"*

PanBlast™ ATV Double Venturi Blast Nozzles

The PanBlast™ ATV Series of Blast Nozzles are double venturi style nozzles, which provide a blast pattern approximately 35% larger than conventional long venturi blast nozzles, while only slightly reducing abrasive velocity.

Along with a larger blast pattern, the PanBlast™ ATV blast nozzles also provide a more even abrasive spread throughout the blast pattern.

A rugged aluminium outer jacket, along with a durable tungsten carbide insert are features of the PanBlast™ ATV blast nozzles, and all feature the standard 50mm (2") coarse contractor thread.

PanBlast™ ATV nozzles provide a medium level of abrasive cutting action, which makes them ideally suited for use with plastic and cereal type abrasive media.

PanBlast™ ATV Series Double Venturi Blast Nozzles

Stock Code	Description	Orifice	Length	Entry	Weight
BAC-NZ-PB-0362	ATV-5 Aluminium Jacket Tungsten Carbide Nozzle	Ø8mm	150mm	25mm	0.77kg
