

PanBlast™ ATN and ABN Blast Nozzles

*"Surface Preparation
Is Our Business"*

The PanBlast™ ATN and ABN Long Series Nozzles are designed as cost effective, general purpose blast nozzles, suitable to a wide range of abrasive blasting applications.

ATN nozzles feature tungsten carbide inserts, while the ABN nozzles feature a boron insert.

Tungsten carbide offers very good durability and toughness, while boron provides longer wear life and lighter weight.

The aluminium jacket provides an excellent level of robustness and durability, making the ATN & ABN nozzles well suited to many of today's most arduous blasting applications.

The venturi design of the ATN and ABN nozzles provide supersonic performance, which greatly increases the abrasive velocity and enhances cleaning speed.

Both the ATN and ABN nozzles are available in sizes ranging from number 4 (6mm or 1/4") through to number 8 (12.5mm or 1/2"). The ATN-4 and ABN-4 nozzles feature a 25mm (1") rear entry, while all other sizes use a larger 32mm (1 1/4") rear entry.

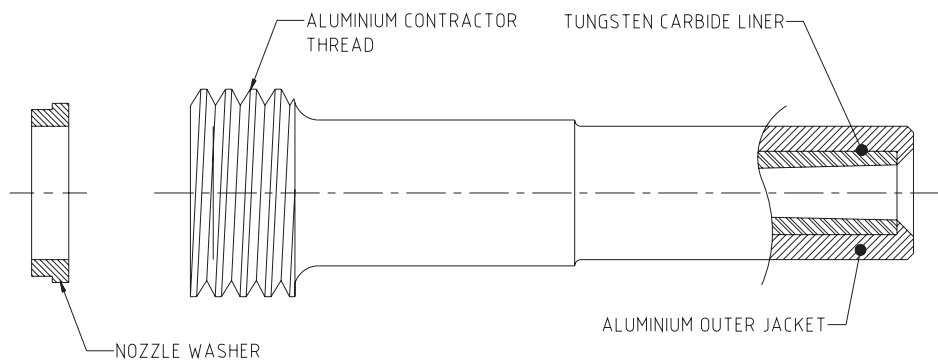

All PanBlast™ ATN and ABN Long Series Nozzles also feature the 50mm (2") contractor style coarse style thread.
