

PanBlast™ UTN and UBN Blast Nozzles

*"Surface Preparation
Is Our Business"*

The PanBlast™ range of urethane jacket blast nozzles are general purpose, durable blast nozzles, which are suitable for a wide range of abrasive blasting applications. Available in both tungsten carbide and boron versions, PanBlast™ Urethane Jacket Nozzles can be used for both open blasting and blastroom applications.

PanBlast™ Urethane Jacket Blast Nozzles feature a tough, shock absorbing polyurethane outer jacket, which helps prevent the nozzle inserts from impact damage.

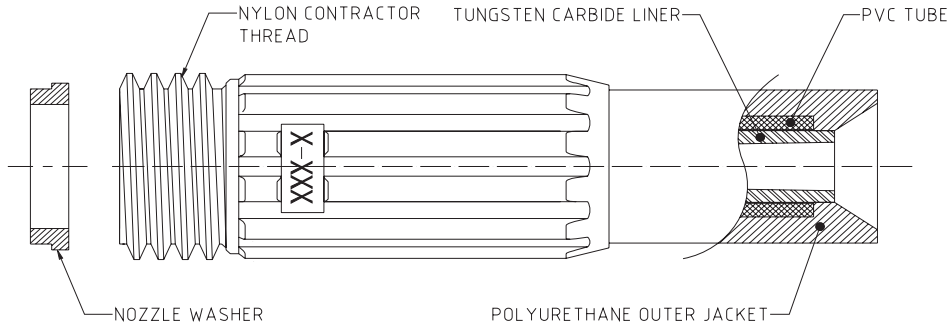

PanBlast™ Urethane Jacket Blast Nozzles are available with either tough, wear resistant tungsten carbide (UTN Series) or lighter and even more durable boron (UBN Series) inserts. All PanBlast™ UTN and UBN series blast nozzles utilize the coarse 50mm (2") contractor style thread.

The long venturi design of the UTN and UBN nozzles provide supersonic performance, which greatly increases the abrasive velocity and enhances cleaning speed. PanBlast™ UTN and UBN nozzles are suitable for use with both NNH series nylon nozzle holders, and ANH series aluminium nozzle holders.
