

PanBlast™ Enviro Garnet BSP Valve

The PanBlast™ Enviro BSP Valve is a cost effective, manually operated, ball type abrasive feed control valve, specifically designed for use with garnet abrasive.

The Enviro BSP Valve features a simple, robust design, constructed from grade 316 stainless steel, which provides long operating life, in even the most arduous conditions.

A urethane insert within the centre of the Enviro BSP Valve is featured to provide accurate abrasive metering, and consistent flow.

The Enviro BSP Valve features 32mm (1 1/4") threaded fitting for simple installation and the tie rod design provides for quick and easy dismantling of the valve assembly as and when required.
