

PanBlast™ Fina Abrasive Control Valve

The low profile PanBlast™ Fina Valve offers one of the highest degrees of abrasive metering adjustment. This permits precise, constant abrasive flow to the blast nozzle, resulting in significant cost savings due to virtually no abrasive wastage.

The PanBlast™ Fina Valve may be used with all abrasive types, from soft plastics through to aggressive metallics.

The simple design of the PanBlast™ Fina Valve permits easy dismantling to remove obstructions or for maintenance.

A hardened steel plunger and orifice assembly meters abrasive flow to the nozzle. Abrasive flow adjustment is via a metering knob that adjusts the depth of the plunger into the orifice.

PanBlast™ Fina Valve Design Features:

- * Hardened steel plunger for long operating life.
- * Urethane plunger sleeve for smooth operation and precise abrasive metering.
- * Easily dismantled for servicing and maintenance.
- * Available with various size pipe connecting nipples.
- * Complete range of replacement parts available.
