PanBlast™ Helix 50 NPT Exhaust Control Valve

The PanBlast™ Helix 50 NPT Exhaust Control Valve is a diaphragm operated air control valve which is used to exhaust the compressed air from the blast pot and is designed to be used in conjunction with the PanBlast™ Helix 100 NPT Inlet Control Valve (or similar).

The PanBlast™ Helix 50 NPT Exhaust Valve is designed to provide fast and effective operation, as soon as it receives a signal from the operators' deadman control handle. Both the valve itself, as well as all its parts are fully compatible with the OEM RMS style valve.

Powder coated outer surfaces, along with anodized internal parts, mean that the PanBlast™ Helix 50 NPT Exhaust Control Valve has a very high resistance to corrosion.

Featuring 19mm (3/4") ports, the PanBlast™ Helix 50 NPT Exhaust Control Valve may also be combined with the PanBlast™ Helix 100 NPT Inlet Control Valve, to create the Helix 150 NPT Remote Control Valve, which is a combined inlet and exhaust valve in the one compact assembly.
