The PanBlast™ Airstop NPT Remote Control Handle is a pneumatically operated, non-bleed type deadman remote control handle.

The PanBlast™ AirStop NPT Remote Control Handle in its un-activated state temporarily isolates and holds the control air signal within the remote control handle. This prevents the control air signal from returning to the pressure blast machine's remote control valve, and thereby keeps the pressure blast machine in a de-pressurized state.

By depressing the control lever, the AirStop NPT Remote Control Handle is activated and allows the control air signal to return back to the pressure blast machine's remote control valve via the twin line control hose. This action causes the pressure blast machine to pressurize, thereby initiating the abrasive blasting process.

PanBlast™ AirStop NPT Remote Control Handles are recommended for use with PanBlast™ Kombi & Kombi II Remote Control Valves.
