

PanBlast™ AirStop Remote Control Handle - Electric Type

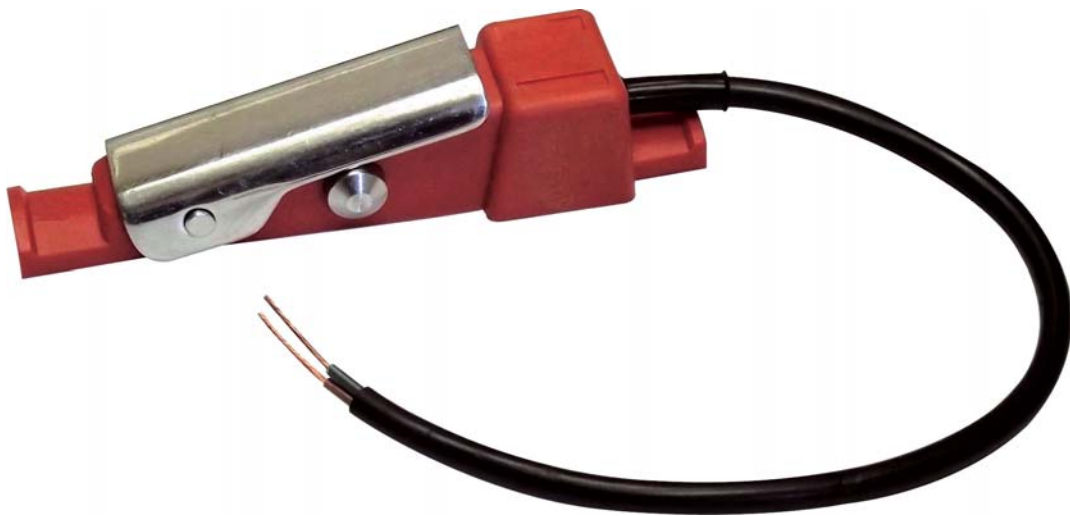

*"Surface Preparation
Is Our Business"*

PanBlast™ Airstop Remote Control Handle

Pan Abrasives manufacture and supply an extensive range of Remote Control Deadman Handles available in various configurations for both pneumatic and electrical operation.

The PanBlast™ AirStop Electric Remote Control Handle operates as an electrical switch style handle. The PanBlast™ AirStop Electric Handle is connected to the blast pot control valve using either a 12 Volt or 24 Volt electrical cable arrangement. (Other voltages are available upon request).

When activated by the operator, the PanBlast™ AirStop Electric Remote Control Handle switch sends an electrical signal to the solenoid control valve, which then in turn activates the remote control system control valve.

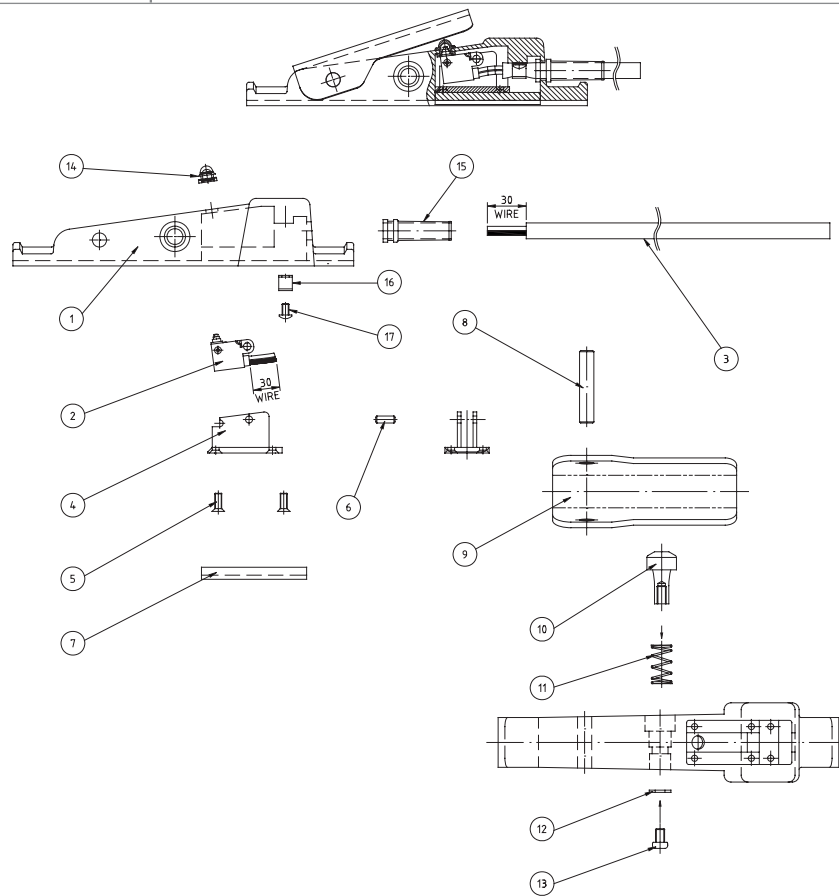

The PanBlast™ AirStop Electrical Remote Control System is ideally suited to overcoming the signal delay problems associated with pneumatically operated control systems when operating over lengths in excess of 40m (130ft).
