

PanBlast™ UniFlo BSP Remote Control Valve

The PanBlast™ UniFlo BSP Remote Control Valve is an air operated inlet/outlet valve utilized to control the supply of compressed air into the blast pot. In its un-activated or closed position, the valve shuts off the compressed air supply to the blast pot and simultaneously opens the pot outlet port to release any compressed air contained in the blast pot.

Operation of the PanBlast™ UniFlo BSP Remote Control Valve is via a pilot air signal from the operator depressing the PanBlast™ AirFlo Remote Control Handle.

Upon receiving a pilot air signal from the depressed AirFlo Remote Control Handle, the PanBlast™ UniFlo BSP Remote Control Valve will instantaneously open, thus permitting the pot to pressurize and supply compressed air to the blast hose. Simultaneously, the Remote Control UniFlo Valve closes the pot outlet port, thus sealing the blast pot.

The PanBlast™ UniFlo BSP Remote Control Valve is a normally closed style valve, utilizing a spring to seal during its un-activated closed state. Being a one piece design, the UniFlo BSP Remote Control Valve is easy to install onto existing equipment and is easily accessible for maintenance without requiring removal from the blast pot.
